

Exp 1b: Cloud9 Setup and Launch, Collaboration demonstration by creation of IAM groups and users.

1. Open your AWS account and search for Cloud9 service inside Developer tools. Create a new Cloud9 environment by filling in the required details. Make sure you use an EC2 instance to create your environment.

https://us-east-1.console.aws.amazon.com/cloud9control/home?region=us-east-1#/create/

aws Services Search [Alt+S] N. Virginia voclabs/user3385491=Mohit_Kerkar @

Create environment Info

Details

Name
MohitCLOUD9
Limit of 60 characters, alphanumeric, and unique per user.

Description - optional
This is my first cloud9 installation
Limit 200 characters.

Environment type Info
Determines what the Cloud9 IDE will run on.

☒ **New EC2 instance**
Cloud9 creates an EC2 instance in your account. The configuration of your EC2 instance cannot be changed by Cloud9 after creation.

☐ **Existing compute**
You have an existing instance or server that you'd like to use.

https://us-east-1.console.aws.amazon.com/cloud9control/home?region=us-east-1#/create/

aws Services Search [Alt+S] N. Virginia voclabs/user3385491=Mohit_Kerkar @

New EC2 instance

Instance type Info
The memory and CPU of the EC2 instance that will be created for Cloud9 to run on.

☒ **t2.micro (1 GiB RAM + 1 vCPU)**
Free-tier eligible. Ideal for educational users and exploration.

☐ **t3.small (2 GiB RAM + 2 vCPU)**
Recommended for small web projects.

☐ **m5.large (8 GiB RAM + 2 vCPU)**
Recommended for production and most general-purpose development.

☐ **Additional instance types**
Explore additional instances to fit your need.

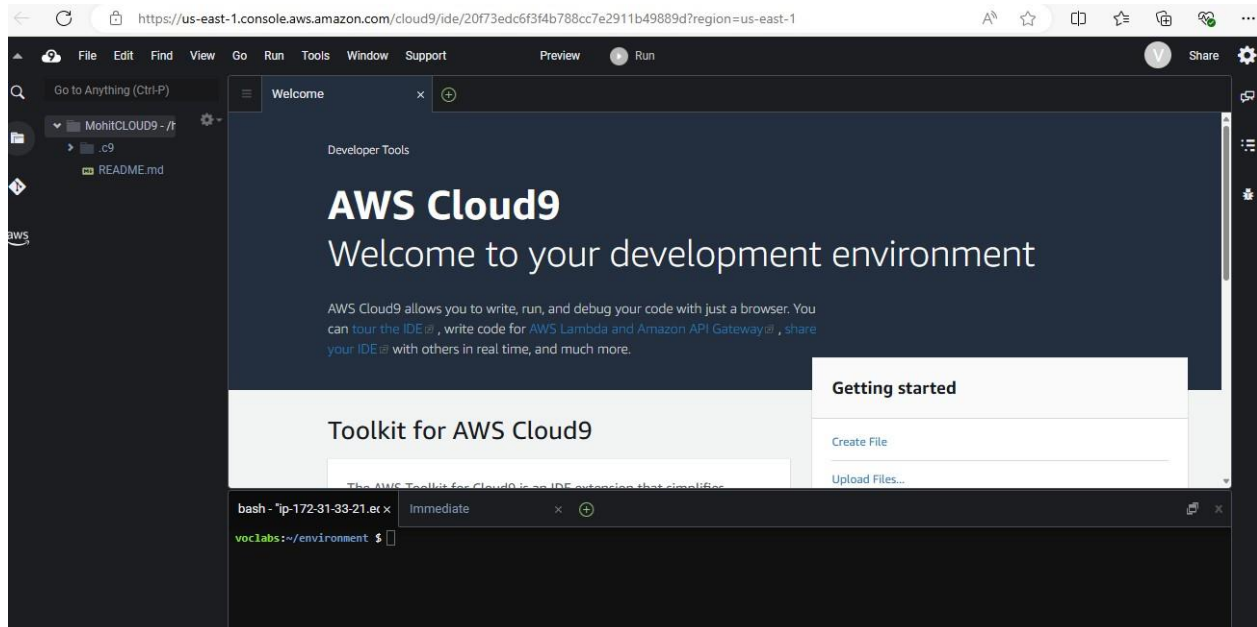

Platform Info
This will be installed on your EC2 instance. We recommend Amazon Linux 2023.

Amazon Linux 2023

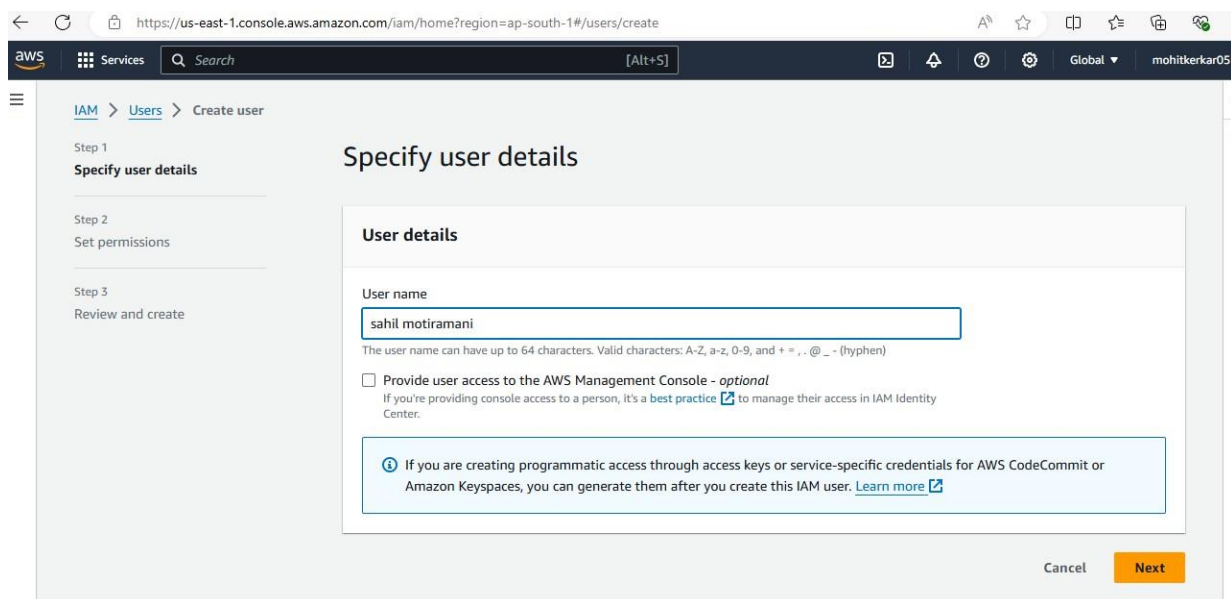

Timeout
How long Cloud9 can be inactive (no user input) before auto-hibernating. This helps prevent unnecessary charges.

30 minutes

2. We have successfully setup and launched our Cloud9 environment. Over here, we can build and develop programs as per our desire. We are also allowed to collaborate with multiple other users and access shared resources.

3. Moving on, we are supposed to create a new user. Give a suitable name to the user and decide the password for the same.

Center, you can centrally manage user access to their AWS accounts and cloud applications.

☒ **I want to create an IAM user**
We recommend that you create IAM users only if you need to enable programmatic access through access keys, service-specific credentials for AWS CodeCommit or Amazon Keyspaces, or a backup credential for emergency account access.

Console password

☐ **Autogenerated password**
You can view the password after you create the user.

☒ **Custom password**
Enter a custom password for the user.

☐ Show password

☒ **Users must create a new password at next sign-in - Recommended**
Users automatically get the `IAMUserChangePassword` policy to allow them to change their own password.

Info If you are creating programmatic access through access keys or service-specific credentials for AWS CodeCommit or Amazon Keyspaces, you can generate them after you create this IAM user. [Learn more](#)

Cancel **Next**

4. Similarly, create a new group and provide a suitable name for the same. Include the IAM users in this group together for our convenience i.e to provide similar kinds of permissions to the entire group rather than an individual user.

aws Services 🔍 Search [Alt+S] ⓘ ⏏ ⚙ Global ▼ mohitkerkar05 ▼

MSBCLOUD9 user group created. [X] ⓘ

[Review and create](#)

Step 4
Retrieve password

☒ **Add user to group**
Add user to an existing group, or create a new group. We recommend using groups to manage user permissions by job function.

☐ **Copy permissions**
Copy all group memberships, attached managed policies, and inline policies from an existing user.

☐ **Attach policies directly**
Attach a managed policy directly to a user. As a best practice, we recommend attaching policies to a group instead. Then, add the user to the appropriate group.

User groups (1/1) [Refresh] [Create group]

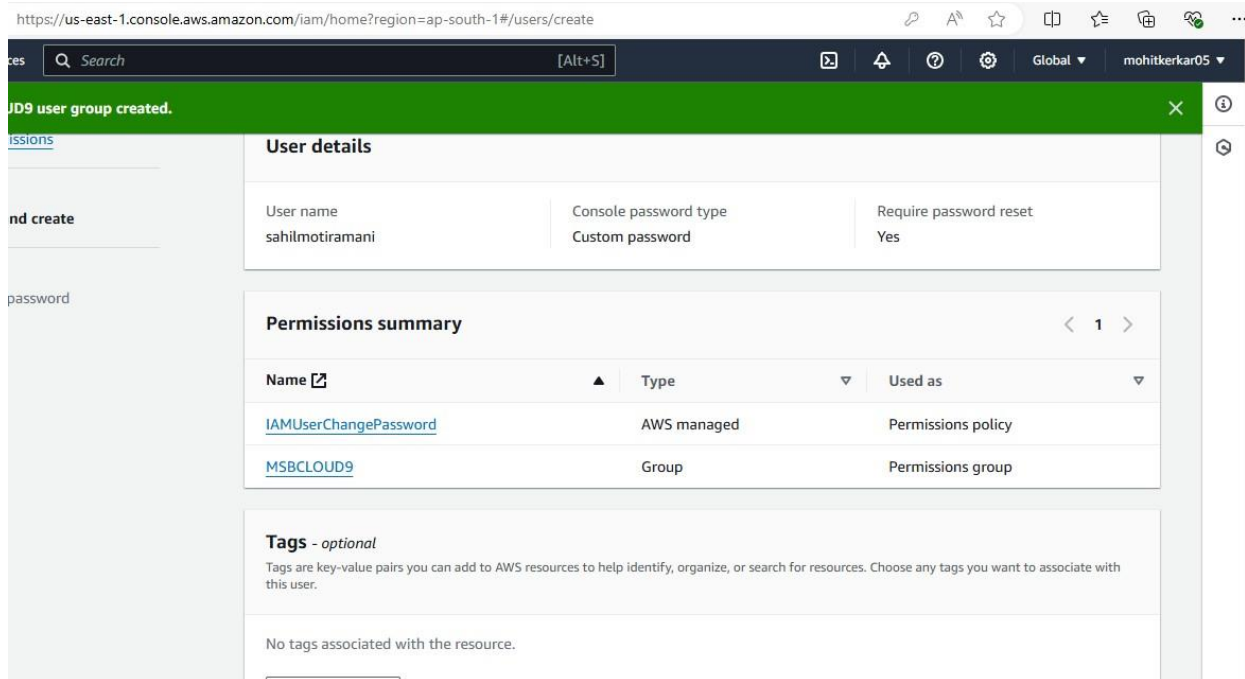

🔍 Search

<input checked="" type="checkbox"/>	Group name ⓘ	Users	Attached policies ⓘ	Created
<input checked="" type="checkbox"/>	MSBCLOUD9	0	-	2024-07-29 (Now)

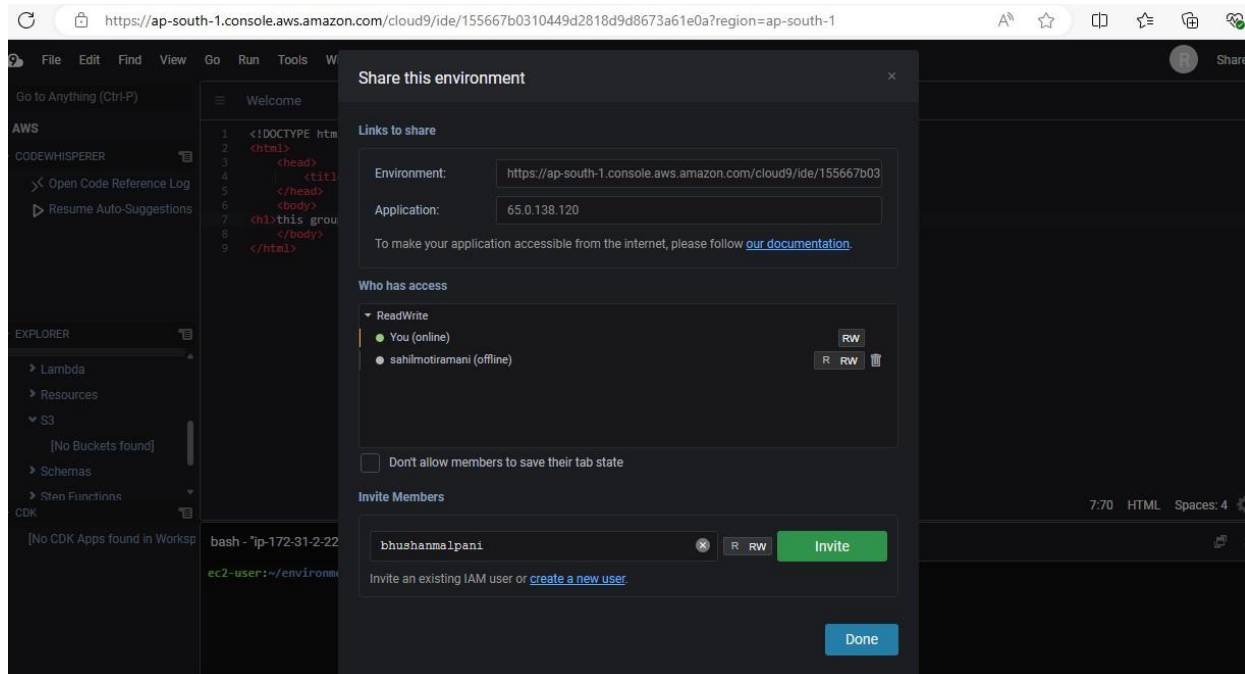

▶ **Set permissions boundary - optional**

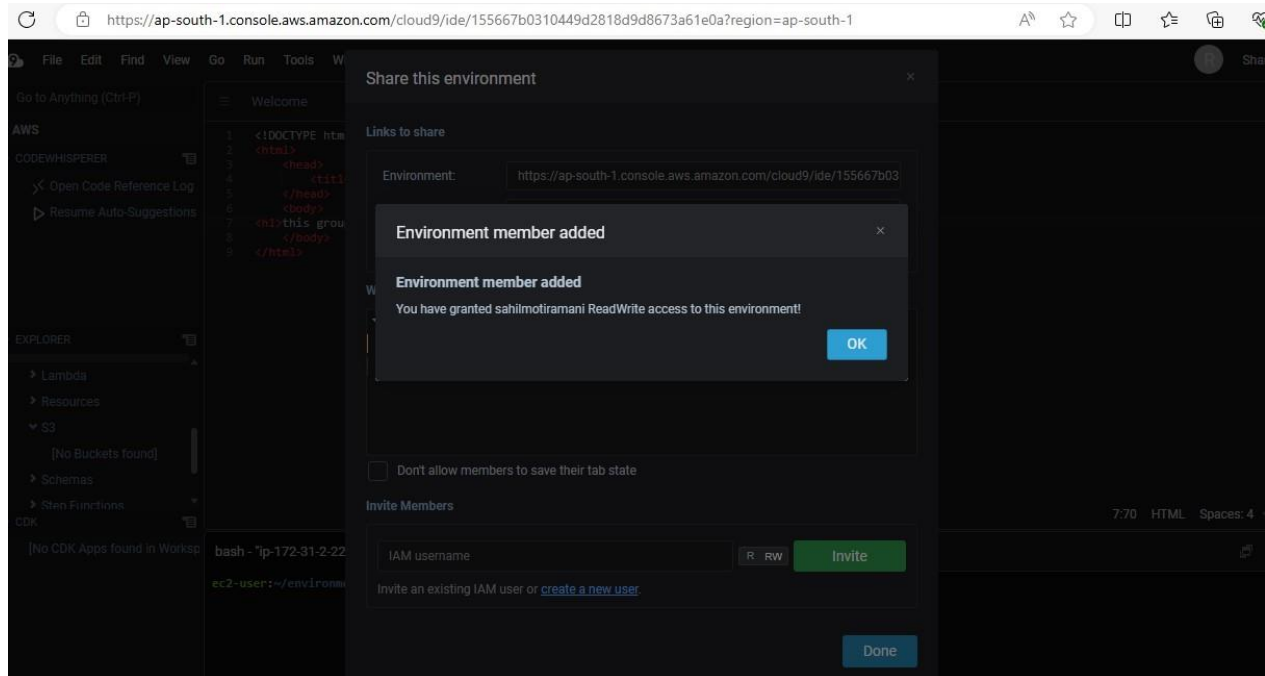

Cancel **Previous** **Next**

5. The user has successfully been created i.e There is a custom made username and a password for the IAM user.

6. Go back to the cloud9 environment. Click on share this environment option so as to allow other collaborators to access you environment. Include your newly made IAM user in this environment and enable Read/Write permissions for it

- Further, we are supposed to login from another browser using the credentials of the IAM user, so as to access the shared cloud9 environment with us. These steps could not be completed because Cloud9 services have been disrupted and there is no access to the IAM user from the remote login
